Established in 1930, Industrial Clutch designs and manufactures a complete line of dry and oil-immersed clutches and brakes ranging in size from 8 in. to over 40 in. diameter with torque capacities exceeding 4,000,000 lb.in.

**LKB Brakes**
These low inertia spring set, air release motor brakes feature a high torque, low energy design, provide quick, smooth stopping and are ideal for failsafe protection of process equipment. Rugged design and large thermal load dissipation make these units very popular in the mining industry.

**LK Series Clutches**
These low inertia air set clutches are ideal for use in marine, mining and metal forming industries.

**LKT Clutches**
The LKT clutch incorporates an extremely low driven inertia and the quickest response with minimal air consumption of any clutch or brake available. It is an ideal choice for metalforming or indexing applications.

**HC Clutches**
The Model HC clutches are designed to be used in either an end of shaft or through shaft mounting configuration. Their compact size makes these units ideal for incorporating within a gear housing. Multiple speed transmissions use a variety of these units to effect fixed mesh speed changes or they may be used as a stand alone device for disconnect service.

**LKM Clutches**
LKM series clutches feature a self-adjusting separating system for wear and no adjustments are ever required by the user during regular use or during routine maintenance. No plate contact can occur with this unique positive brake separation system and the many advantages of the disc clutch can be fully realized for marine applications.

**HBA/HBS Brakes**
The Model HBA brake is an oil immersed, air or hydraulically set brake designed to be mounted on a drive train shaft extension. The Model HBS brake is identical to the Model HBA brake except the unit is designed to be spring-set and hydraulically or pneumatically released.

**CBH Series Clutch/Brakes**
The Model CBH combination clutch-brakes are oil immersed units with a spring-set brake and hydraulically-set clutch. They are designed for extremely high cyclic rates for those applications that require a high degree of stopping accuracy.

**CBA Series Clutch/Brakes**
The Model CBA combination clutch-brake is an oil immersed unit utilizing a self-contained cooling oil-pumping system and capable of being actuated with either air or hydraulic pressure.

Motion Control and Power Transmission Solutions
Altra is a premier global designer and producer of a wide range of motion-control and power transmission solutions, with engineered components and systems that provide the essential control of equipment speed, torque, positioning, and other functions. Altra products can be used in nearly any machine, process or application involving motion. From precision measures embedded in medical robotics to heavy-duty brakes used in drilling applications, Altra has been solving complex customer challenges around the world for decades.

Get Connected
The Altra Newsroom makes it quick and easy for you to get the news you need when you need it. From new literature releases to trade show schedules, the news is at your fingertips 24 hours a day.
